

AKSHARA BEATHAM

Senior Software Tester — Test Automation & Quality Assurance
Heinsberg, Germany | beatham.akshara@gmail.com | +49 176 619 52439

PROFESSIONAL PROFILE

Quality Assurance Engineer with 6+ years of hands-on experience testing complex web, mobile and enterprise software systems within agile, cross-functional Scrum teams. Proven track record of owning test strategy, designing and executing functional, regression, end-to-end and acceptance test cycles, and driving QA process improvement in close collaboration with software developers and international project members. Builds and extends automated test frameworks (Selenium WebDriver, Appium, Playwright, Cypress) and maintains structured, audit-ready test documentation in TestRail, Jira Xray and Confluence. Quick to pick up new tools and technologies — has independently learned additional automation frameworks (Playwright, Cypress) beyond formal training. ISTQB Certified Tester (Foundation Level).

CORE QA COMPETENCIES

Test Levels & Types: Functional, regression, end-to-end and acceptance testing; requirements analysis; risk-based test design

Root Cause Analysis: Systematic defect investigation using logs, traces and reproducible evidence, working directly with developers on sustainable fixes

QA Strategy & Process: Test strategy ownership, QA process improvement, testability review of user stories, Definition of Done consulting

Test Documentation & Compliance: Maintenance of test plans and test cases, audit-ready documentation, structured defect reporting in TestRail, Jira/Confluence

IT Skills: MS Office (Word, Excel, PowerPoint, Outlook) for documentation, reporting and communication; Windows & macOS environments

Adaptability & Resilience: Quick to grasp new requirements and tools; embraces new challenges with flexibility and resilience under shifting priorities and deadlines

AUTOMATION & TOOLING

Automation Frameworks: Selenium WebDriver, Appium, TypeScript (Jest), JavaScript, Node.js, npm; Playwright, Cypress (self-directed)

Test Architecture: Page Object Model (POM); reusable, maintainable automation frameworks spanning multiple functional modules

Test Management: TestRail, Jira Xray, Confluence

Test Environment Setup: Setting up and configuring VMs; installation of applications for testing; building and maintaining test environments, including application/environment configuration (user accounts, network and database connections)

API Testing: SoapUI — validating REST API requests and JSON responses (e.g. Salesforce backend integration)

CI/CD & Source Control: GitLab CI/CD pipeline integration; Git, branching, pull requests, code reviews

METHODOLOGIES

Agile / Scrum / Kanban | SDLC & STLC | Risk-based testing | TDD / BDD / ATDD (conceptual familiarity)

PROFESSIONAL EXPERIENCE

Quality Assurance Engineer

2019 – Feb 2026

Service1 GmbH, Paderborn

Test Strategy, Root Cause Analysis & Process Improvement

- Owned test strategy and designed comprehensive test plans for complex web and mobile applications, running functional, regression, end-to-end and acceptance test cycles across every sprint release in an Agile Scrum environment, working closely with software developers and international project members.
- Performed systematic root-cause analysis on test failures using logs, traces and reproducible evidence, working directly with developers on sustainable fixes rather than one-off patches.
- Proposed and implemented improvements to QA processes and test methodology; evaluated user stories for testability and consulted with product owners and developers on acceptance criteria and Definition of Done.
- Maintained test plans, test cases and defect documentation in TestRail, Jira Xray and Confluence, keeping records current and audit-ready.

Test Automation & Framework Development

- Developed and maintained automated test frameworks using TypeScript, Selenium WebDriver, Jest and Appium, implementing Page Object Model (POM) for scalable suites spanning multiple functional modules — directly transferable to other GUI-based automation tools.
- Integrated automated test suites into GitLab CI/CD pipelines, enabling automatic execution on pull requests and deploys and giving development teams fast, reliable quality feedback.
- Identified and stabilised flaky tests, improving framework reliability and release confidence.
- Performed REST API validation using SoapUI, sending requests against the Salesforce backend and validating returned JSON data as part of end-to-end test scenarios.
- Set up and configured VMs and test environments, including installation of applications and configuration of application settings, user accounts, and network/database connections, to ensure reliable, repeatable test execution.

Cross-Module, Mobile & Web Testing

- Delivered end-to-end QA for complex CRM/Salesforce applications, ensuring reliable functional test coverage across the platform.
- Conducted thorough cross-browser testing (Chrome, Firefox, Safari, Edge) and validated mobile applications on iOS and Android.
- Mentored junior colleagues and contributed to QA community knowledge-sharing, promoting best practice and supporting colleagues' development.

Working Student – QA Engineer 2017 – 2019

- Supported manual and automated testing of web and mobile applications; executed regression and functional tests.
- Performed cross-browser testing; assisted with automated test script development and defect reporting.

EDUCATION

M.Sc. Computer Science 2014 – 2019
University of Paderborn, Germany

B.Tech. Computer Science & Engineering 2009 – 2013
VNR VJIET, Hyderabad, India

CERTIFICATIONS & LANGUAGES

Certification: ISTQB Certified Tester – Foundation Level

Languages: English – Fluent (C1+) | German – B1 certified, working toward B2 | Telugu – Native | Hindi – Fluent
